

Dear Sandra Barr

Thank you for your letter on what we think about the wind turbines being that you plan to be situated in Fairlands Park, I want to inform you about what we could do to improve or change to better benefit the whole of Stevenage and its residents. I hope that my opinions can make a positive change to Stevenage as I want to give back to the place in Hertfordshire that I hold dear.

### **Advantages and disadvantages**

To commence with, I would like to say the idea of going green for the whole of Stevenage to give it a better future for its residents is extremely advantageous. You and the rest of the council is doing a phenomenal job by installing the wind turbines to make more sustainable a energy source but one of the disadvantages is that the space it takes up could disturb many people from their day to day actions. This could cut off a huge leisure area for many people who enjoy using that area for themselves would make many unhappy with the changes. Also many think that the wind turbines are ugly which can most likely displease the public. However, Wind turbines are also much cheaper than solar panels making them very useful. To better protect the wind turbines we would need police to patrol them to protect them from vandals.

### **What we could change**

To better deal with the problems of the public we could move the wind turbines to the less populated areas as people say they look ugly. In addition, this covers the problem with it being in an area where many people want to enjoy a leisure area as if we don't this can affect their wellbeing. If you have the money, the council can use solar panels as they are smaller and are suggested much more nice looking. But we can also put the wind turbines not too close to nature as it can damage its wildlife.

### **What this does**

The idea of having renewable energy is really great as it promotes being more planet friendly and the better future we want for the world because the wind turbines will create a never ending energy source that can power homes for long periods of time. The turbines will also create more job opportunities for future generations and the present day children. To add on, money can be made from this installation to create more things for Stevenage and its public to get more of

what they need and want to give them the best way of living in this area of Hertfordshire to meet the high standards of this lovely place.

Dear Sandra Barr, thank you more than enough for reading this letter. I wish it can come to use when choosing a beneficial path for Stevenage and its residents and that you and the rest of Stevenage council will continue to get this place to its full potential.

Yours sincerely

Nathan Oluwatobi Konu, year 6 student of Roebuck academy.
